Experience

○ **Nov 2022 - Present**
SDSN - Paris

Full Stack Web Developer

Develop data visualizations and static websites and manage all related maintenance, updates, and upgrades. Collaborate with cross-functional teams to gather requirements and refine project objectives. Lead all aspects of projects from planning to execution.

Key accomplishments:

- Managed significant amount of data locally culminating in reduced Json files.
- Created new ways of visualizing specific data from scratch.
- Created an innovative way to test all observations (approximately 3,500 JEST tests) which run under 3 seconds.
- Created stateful URLs with query parameters for sharing among other users.

○ **Aug 2022 - Present**
rawDev - Paris

Full Stack Web Developer

Established and lead a start-up specializing in the development of web applications for small businesses.

Key accomplishments:

- Innovated and implemented diverse functionalities such as contact forms, email validation, role-specific user authentication, global state management, and codebase optimization based on a balance between DRY principles and code readability.
- In-process of creating two distinct websites and an e-commerce platform, overseeing end-to-end development efforts.

○ **Apr 2022 - Aug 2022**
Full time Parenting

Getting to know my son

○ **Sep 2008 - Apr 2022**

Baker McKenzie | PwC | EY | Deloitte - France, USA & Spain

Transfer Pricing Economist

Directed and mentored over 20 individuals in the delivery of complex data models and impactful data visualizations, in order to determine pricing among affiliated entities.

Key accomplishments:

- Led a team of 6 experts to establish best practices for data visualization and data model creation, improving processes that was further implemented across the NorthEast US region.
- Led multiple high-value projects for clients with revenues exceeding \$200B, and multiple initiatives that created substantial cost efficiencies.
- Managed employee training sessions on creating data models and data visualizations.
- Innovated/designed an array of automated tools, ranging from ROI calculations, supply chain modeling, and valuation analysis such as raw-to-formatted data conversion achieving significant cost reduction for multiple projects.
- Created a supply chain analysis, by pulling data from 200 profit and loss statements, and implemented automated updates to transform a previously time-intensive task into a 30-second process.
